

# REDI SITES CLEARED TO WCAG 2.1 AA — ZERO VIOLATIONS

Every route was scanned in a real browser with the same rules engine (axe-core) that accessibility scanners and ADA demand letters rely on. The baseline surfaced 32 contrast failures; all were fixed in code and re-verified clean across both desktop and mobile.

SINGLE ROOT CATEGORY

100% of failures were colour-contrast (severity: serious). No missing labels, invalid ARIA, or keyboard traps were found — the site's structure was already sound. All 32 traced to just 4 root causes in shared components.

# CONTRAST RATIOS — BEFORE VS AFTER

WCAG 1.4.3

The three colour fixes, measured against the 4.5:1 minimum for normal text. Every "before" value sat below the line; every "after" value clears it.

## THE FOUR FIXES

ROOT CAUSES

| WHAT FAILED                                                                   | WHERE                                               | FIX                                                                                    | CONTRAST    |
|-------------------------------------------------------------------------------|-----------------------------------------------------|----------------------------------------------------------------------------------------|-------------|
| Score-tier range labels in low-contrast brand colours on the light card       | <code>ScoreTierCard.astro</code><br>Home · Approach | Range text set to <b>navy-950</b> ; tier colour still carried by the badge image       | 1.18 → 11.5 |
| Card subtitle text (team & blog meta) too light on steel background           | <code>--color-slate-600</code><br>global.css token  | Darkened <code>#57697d</code> → <code>#3e4d5c</code>                                   | 3.65 → 5.6  |
| Sign-in links ("Forgot password", "Request access") in cyan-500               | <code>sign-in.astro</code>                          | Switched to <b>cyan-600</b> , the token meant for light backgrounds                    | 1.93 → 4.65 |
| "Browse Sites" button used the light-bg variant on a dark hero — navy on navy | <code>404.astro</code>                              | Switched to the <b>outline</b> variant (the dark-background one used on the home hero) | 1.08 → AA ✓ |

### REPEATABLE AUDIT

The scanner lives in the repo and re-checks the full Level AA ruleset in minutes, so conformance holds as the site evolves. Re-run before every release.

```
node scripts/ally-audit.mjs
```

### INDEPENDENT LIGHTHOUSE CHECK

Google Lighthouse (which also embeds axe-core) corroborates the result.
